

Lantana 600 herbicide is still in short supply

6th March 2018

The return of the popular herbicide Lantana DP 600 may be short lived according to the Australian maker of the product Agricrop Pty Ltd.

Lantana 600 is the ideal herbicide to use in an integrated approach to Lantana spp. management and is often used in conjunction with mechanical and fire control methods to affect a long term eradication program.

“It is regrettable that supplies of this ever popular herbicide are once again limited due to issues with sourcing the active from our supplier” said Mr Jim Lyons, a Director at Agricrop Pty Ltd.

Lantana 600 Herbicide is a highly cost effective method of weed control and has minimal effect on grass and understory species. “It is also non residual in soil, can be applied by knapsack or handgun at a general rate of 5mL/L or 1L/200L of water and is available in convenient 5L and 20L packs” said Mr Lyons.

Growers who appreciate the excellent benefits of Lantana 600 are urged to purchase their product needs as soon as possible to avoid missing out.
